HEAT SAFETY TIPS
FOR ATHLETES AND COACHES

The N.C. Division of Public Health encourages young athletes and
coaches to be especially careful when exerting themselves during
high temperatures in North Carolina. According to the American
Academy of Pediatrics, when the air temperature exceeds 95°F
(35°C), children have a lower exercise tolerance and ability to adapt to extreme
temperatures than adults. Adolescents’ ability to adapt falls in between.

With pre-season practices underway, it is critical for young athletes to take time to adjust
to the heat to minimize the risk of heat illness. By slowly increasing heat tolerance, the
athlete is better able to exercise safely and effectively in warm to hot conditions. This
doesn’t happen quickly. Children under 10 should adjust with short daily exposures to
exercising in high temperatures – 30 to 45 minutes per day – for up to 10 days. The
National Athletic Trainers’ Association recommends that adolescent athletes should
allow up to 14 days to become fully adjusted, gradually building intensity and duration of
work in the heat.

Here are some tips for coaches and athletes to play it safe during hot weather:

Recommendations for Athletes and Parents

➢ Wear light-colored and lightweight clothing. If clothes become saturated with
sweat, change into dry clothes.
➢ Drink cold water as frequently as possible. During long bouts of intense exercise,
it’s a good idea to use a sports drink that contains sodium to replace the sodium
lost in sweat. Most sports drinks contain adequate salt. Salt tablets are not
recommended.
➢ Pay attention to early signs and symptoms of dehydration, which include: dry or
sticky mouth, thirst, headache, dizziness, cramps, and/or excessive fatigue.
➢ Tell your coach right away if you feel dehydrated or sick. Don’t let
embarrassment keep you on the field.
➢ Sleep at least six to eight hours at night in a cool environment, eat a well-
balanced diet, and stay hydrated throughout the day, even when you are not on
the playing field.
➢ Track body weight to make sure you are properly hydrated. Your goal should be
less than 2 percent body-weight change during a practice session.

Recommendations for Coaches

➢ Know the signs and symptoms of heat-related illness. Educate athletes and
coaches regarding the prevention, recognition, and treatment of heat illnesses.
➢ Be aware not only of heat, but of humidity levels when evaluating conditions for
practice. A good measure is the web bulb globe temperature (WBGT) – the
standard index of temperature and humidity combined. Measuring devices are
available commercially.
➢ Schedule training sessions to avoid the hottest part of the day (10 a.m. to 5 p.m.)
➢ Enforce regular rest periods in the shade and see that players drink water every
15 minutes during hot and humid weather.

March 2014
> Substitute players frequently to allow adequate rest periods.
> Encourage athletes to stay hydrated throughout the day, before and after practice.

**How much water?**

When a child is participating in prolonged physical activity, the following guidelines are recommended:

A child weighing 88 lbs should drink 150 mL [5 oz] of cold tap water or a flavored salted beverage every 20 minutes.

A child weighing 132 lbs should drink 250 mL [9 oz] cold tap water or a flavored salted beverage every 20 minutes.
